Subject: Importing from, Exporting Eclipse Projects to Shared Google Drive

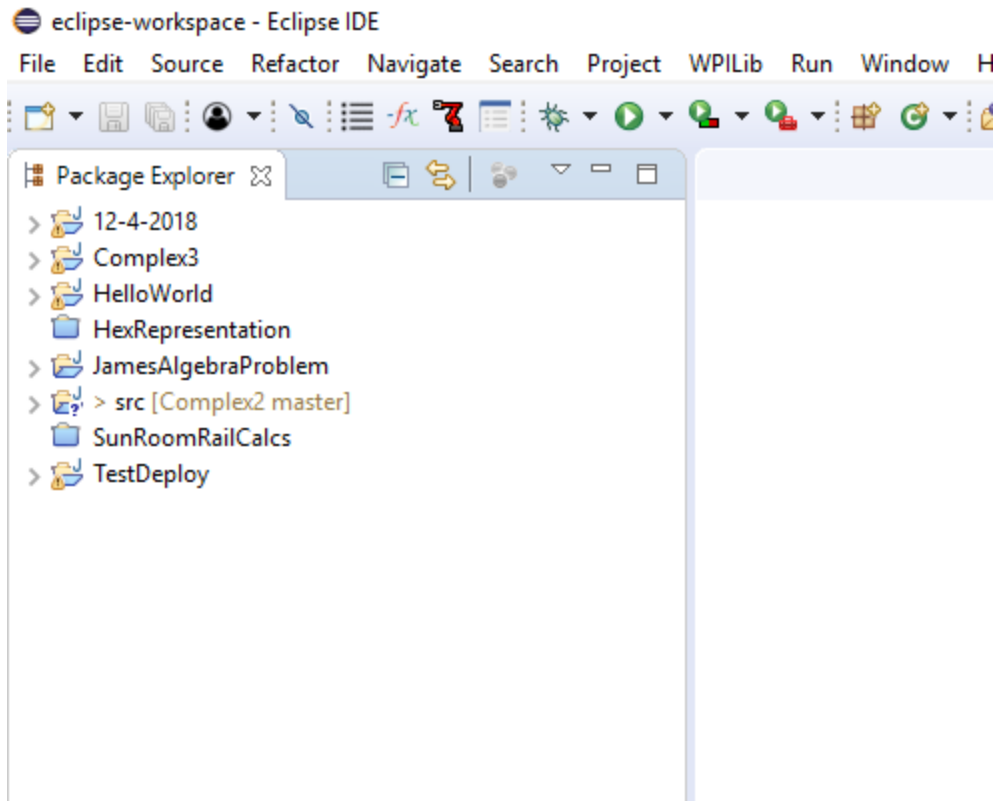

Date: 20 December 2018

Import

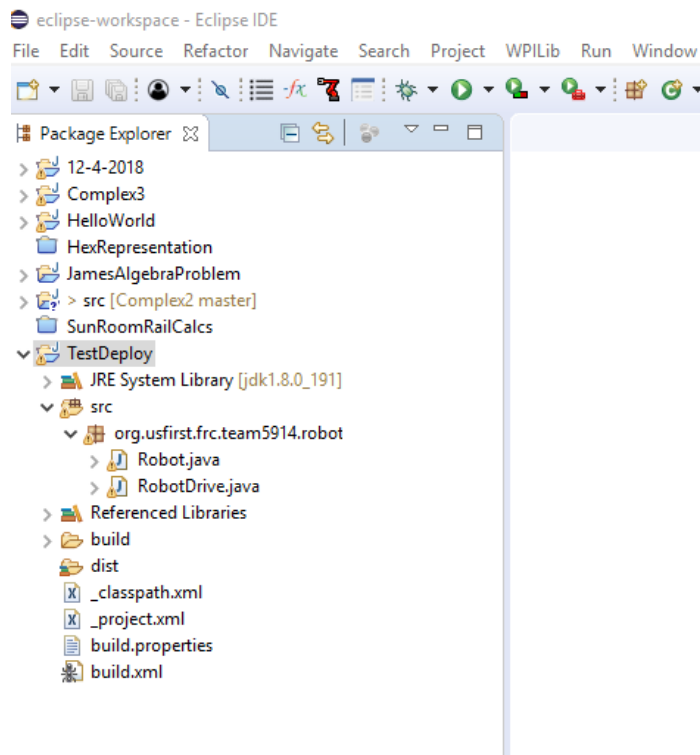

1. Access shared Google drive:
 - drive-google.com
 - Shared with me
 - 5914 Programming
 - Non-Main Robot Files
 - TestDeploy
2. Download and Locate
 - Access download directory
 - Extract zipped project
 - Open directory
 - Copy directory "TestDeploy" to Eclipse workspace.
3. Open Eclipse
 - LClick File->Open Projects from File System

- Click project folder.
- Project will now be visible in Package Explorer

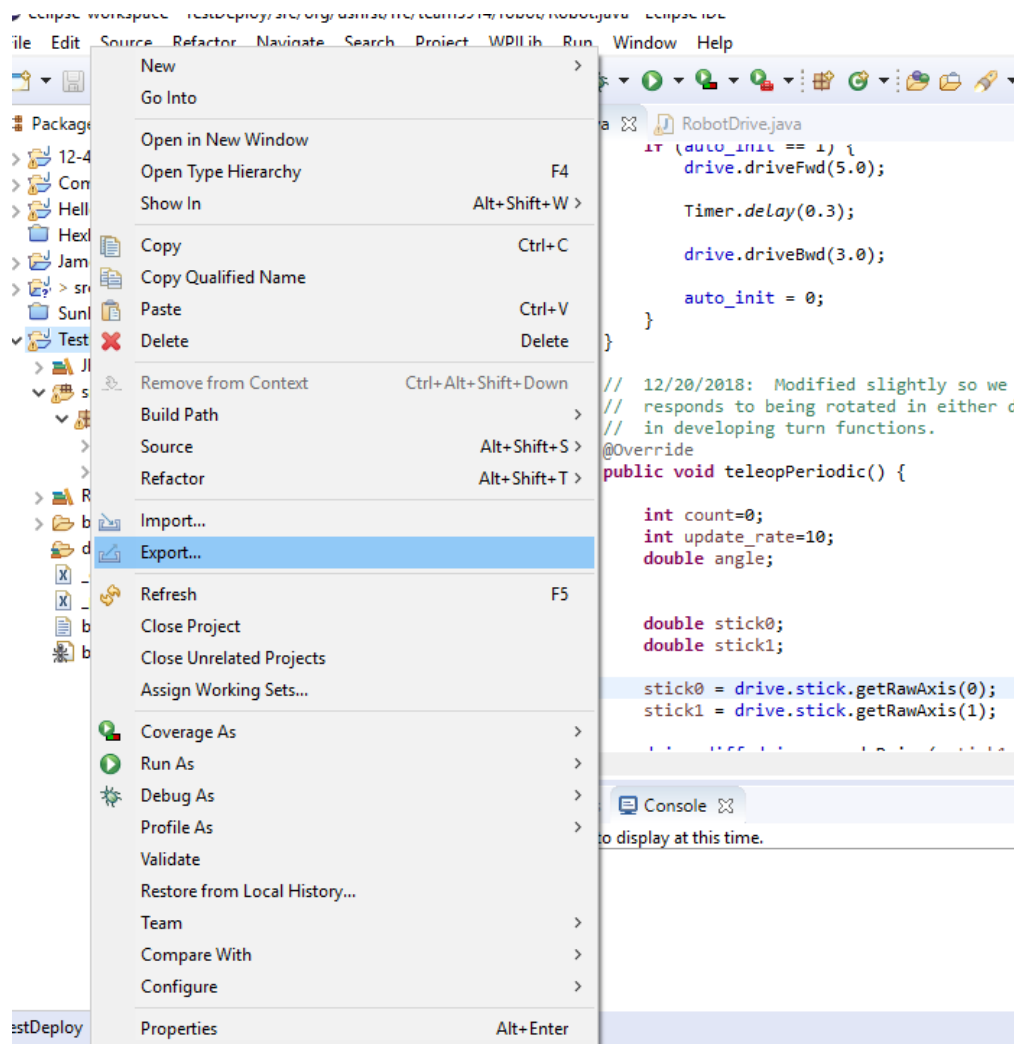

- Double LClick “TestDeploy” in Package Explorer – open source folder of interest.

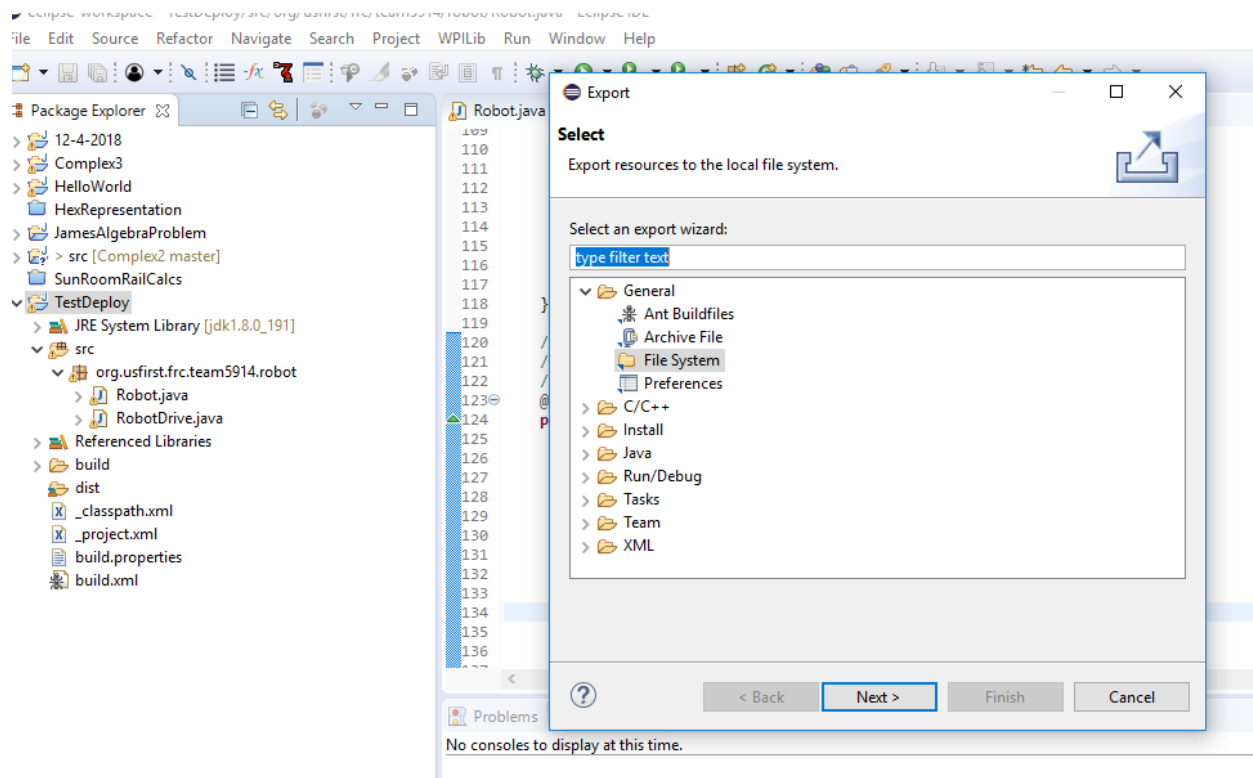

Export

It is assumed that you have made changes in the code and you wish to upload the new code to the google drive for 5914.

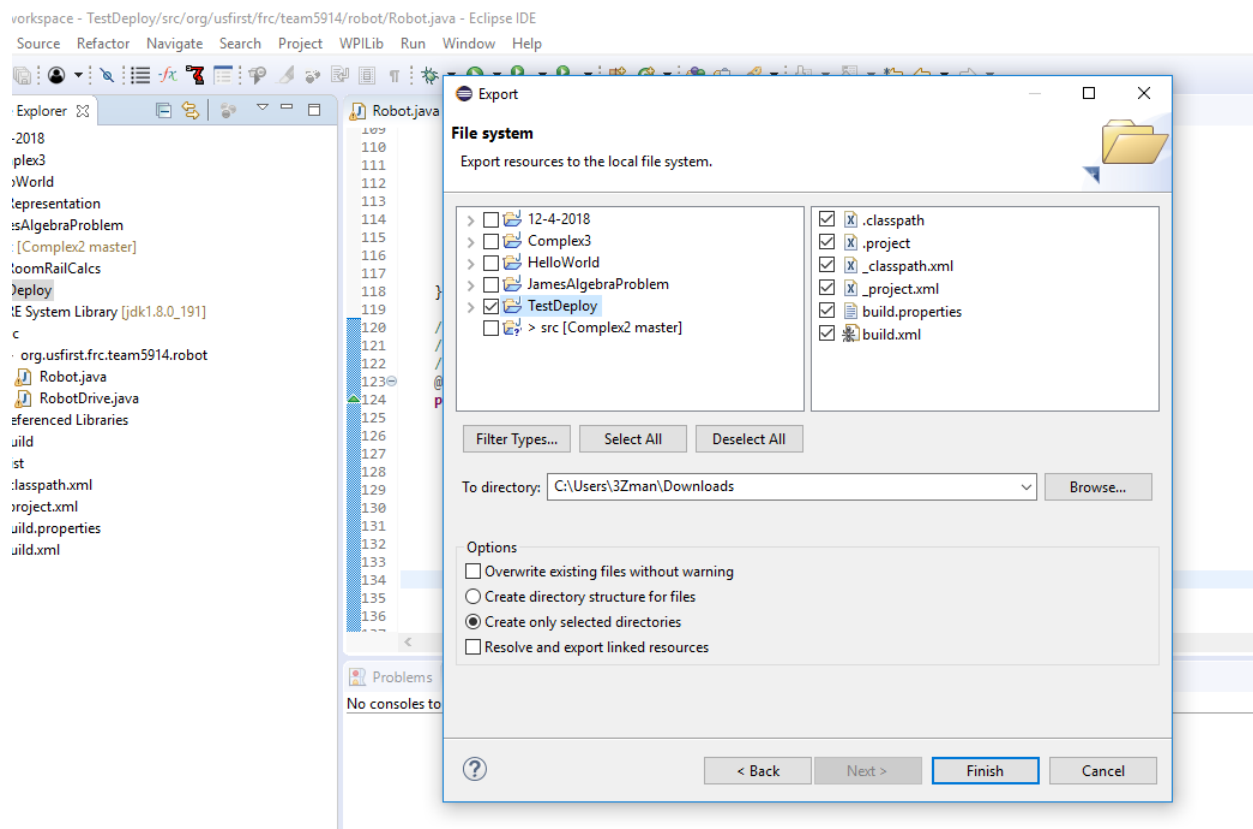

1. In the PackageExplorer right click on the project, in the case, "TestDeploy".

2. Left click "Export".

3. Under “General” left click “File System”. There should be check marks on all options.

4. Under “directory”, select “downloads”.
5. Create only selected directories. Left click “Finish”.
6. Drag and drop on Google Drive (our shared drive). Do not allow an overwrite of the existing file.
This will allow “backtracking” in the event that we paint ourselves in a corner.
